Chapter 81: Inner World's Army after 1 Year Inside

In Chapter 81, we will calculate the total number of troops for the lesser Absolutes and their allies after one year inside the inner worlds. The growth rates for each army and their respective allies are as follows:

Umbrios' Army and Materialized Shadow Troops grow by 10000% (i.e., their numbers increase by 100 times the current total).

Lumiel's Army and Drakion's Army, along with their respective allies, experience a 100% growth (i.e., their numbers double).

We will start by calculating the total growth for each faction and its allies based on the numbers provided in Chapter 77 and the previous chapter:

---

1. Lumiel's Army of Light:

Celestial Archons:
Initial: 73.725 billion
Growth (100%): 147.45 billion

Luminara Knights:
Initial: 8.3 quadrillion
Growth (100%): 16.6 quadrillion

Lightborn Legion:
Initial: 930 quadrillion
Growth (100%): 1.86 quintillion

Seraphim Riders:
Initial: 36.7 billion
Growth (100%): 73.4 billion

Total for Lumiel's Army of Light after 1 year:
147.45 billion + 16.6 quadrillion + 1.86 quintillion + 73.4 billion = 1.86 quintillion + 16.6 quadrillion + 220.85 billion

---

2. Umbrios' Shadow Legion:

Shadow Warlords:
Initial: 516.125 million
Growth (10000%): 51.6125 billion

Ebon Knights:
Initial: 6.67 quadrillion
Growth (10000%): 667 quadrillion

Nocturnal Stalkers:
Initial: 1.33 quintillion
Growth (10000%): 133 quintillion

Nightshade Beasts:
Initial: 21.6 billion
Growth (10000%): 2.16 trillion

Materialized Abyssal Warriors:
Initial: 3 quintillion
Growth (10000%): 300 quintillion

Materialized Duskborn Shadows:
Initial: 900 trillion
Growth (10000%): 90 quadrillion

Total for Umbrios' Shadow Legion after 1 year:
51.6125 billion + 667 quadrillion + 133 quintillion + 2.16 trillion + 300 quintillion + 90 quadrillion = 433 quintillion + 757 quadrillion + 53.6125 billion

---

3. Drakion's Draconic Host:

Draconian Overlords:
Initial: 166.5 million
Growth (100%): 333 million

Flameborn Legionnaires:
Initial: 9.3 quadrillion
Growth (100%): 18.6 quadrillion

Skybound Wyverns:
Initial: 930 trillion
Growth (100%): 1.86 quadrillion

Infernal Titans:
Initial: 8.3 billion
Growth (100%): 16.6 billion

Total for Drakion's Draconic Host after 1 year:
333 million + 18.6 quadrillion + 1.86 quadrillion + 16.6 billion = 20.46 quadrillion + 349.9 million

---

Final Combined Total of All Troops (after 1 year):

1. Lumiel's Army of Light:
1.86 quintillion + 16.6 quadrillion + 220.85 billion

2. Umbrios' Shadow Legion:
433 quintillion + 757 quadrillion + 53.6125 billion

3. Drakion's Draconic Host:
20.46 quadrillion + 349.9 million

Total Combined Troops after 1 year:

Quintillion: 1.86 quintillion (Lumiel) + 433 quintillion (Umbrios) = 434.86 quintillion

Quadrillion: 16.6 quadrillion (Lumiel) + 757 quadrillion (Umbrios) + 18.6 quadrillion (Drakion) = 792.2 quadrillion

Billion: 220.85 billion (Lumiel) + 53.6125 billion (Umbrios) + 349.9 million (Drakion) = 274.412 billion

---

Final Ultimate Total:
434.86 quintillion + 792.2 quadrillion + 274.412 billion

This demonstrates the immense growth in the lesser Absolutes' armies after one year inside the inner worlds, with their total power growing exponentially, particularly Umbrios' forces, which experienced a 10000% growth in size.
